

YOUR COMPANION. YOUR RULES.

ZeroKey Mate.

Ask for a beer.
Prove your age privately.
Pay on Arc.

DEMONSTRATED ON A PHYSICAL IPHONE

THE PROBLEM

The shop needs one fact.

"Are you twenty or older?"

An age check should not require sharing your identity document.

20+

The required fact.
Your birth date stays private.

THE EXPERIENCE · EDITED REAL-DEVICE FOOTAGE

“Buy me one beer.”

PHYSICAL CARD + REAL TESTNET PURCHASE

Recorded on a physical iPhone.

Watch the narrated film on the public project page. Recorded takes are combined. Card password entry is omitted.
No real money or physical delivery.

The phone understands. Code controls the action.

Conversation stays local.
The model never receives card data or a signing tool.

IMPLEMENTED · VOICE ENTRY USER-CONFIRMED

Prove the fact. Keep the evidence private.

ProveKit from World Foundation · pinned experimental Groth16 backend.
This flow uses My Number card identity, not World ID authentication.

What leaves the phone?

STAYS ON THE IPHONE

Your private evidence

- Conversation and camera processing
- Card password, certificate and signature
- Name, address and date of birth

GOES TO THE STORE

A proof for this order

- Age proof + public order inputs
- Buyer address and exact payment
- Verification result and receipt

Wallet login, store access and chain queries use the network.
Payments remain public and linkable.

Verified age. Exact payment.

01 · STORE CHECKS AGE FIRST

02 · USER APPROVES ONE PAYMENT

Age verification and token transfer are separate operations.
The Worker enforces the age gate; the USDC contract does not call it atomically.

TECHNOLOGY STACK · EVERY LAYER HAS A JOB

Built for the whole journey.

01 · COMPANION

Apple native stack

SwiftUI · Foundation Models
Speech · DockKit · CoreNFC

02 · PRIVATE PROOF

Noir + ProveKit

JPKI / RSA · Local age circuit
Native Groth16 · EVM verifier

03 · STORE

Cloudflare

Workers · D1 · Durable Object
Orders, verification and recovery

04 · PAYMENT

Privy + x402 + Arc

Embedded buyer wallet
Exact USDC payment + receipt

WORKING RESULT

Your companion. Your rules.

12.0 s

Local age-proof processing

One observed physical-card run.
Includes preparation and local verification.

0.10

test USDC settled on Arc

Open the first confirmed purchase ↗
Real receipt · not a general benchmark

An agent that acts.

A phone that keeps your identity evidence private.

Experimental testnet build · One configured store · Explicit payment approval

What works today.

DEMONSTRATED	Physical card → local age proof → Privy / x402 → Arc receipt
DEMONSTRATED	English checkout, explorer link and saved-order recovery
IMPROVING	Intermittent checkout reliability and the hands-free experience
NOT INTEGRATED	World ID, smartphone My Number card, delegated payments and live Graph decisions

The current entry is a working testnet prototype.
Partner eligibility depends on the event rules and final evidence.

Precise claims. Reviewable evidence.

Proof assumptions

Experimental ProveKit Groth16 branch
Single-party test setup
Certificate revocation is not checked

[World Foundation / ProveKit ↗](#)

Execution assumptions

Two RPC providers must agree
Worker enforces age before fulfillment
One exact payment needs user approval

[Contracts, receipts and device evidence ↗](#)

12.0 s is an app-level local proof-processing observation, excluding NFC and network steps.
The edited demo combines recorded takes; no uncut single-order recording is claimed.
